## **DETAILED ACTION**

### ***Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-23, drawn to an image sensing apparatus with a circuit that adds signals from a plurality of pixels to produce a single pixel signal, classified in class 348, subclass 294.
  - II. Claims 24-34, 54, and 55, drawn to an image sensing apparatus with some sections containing scanning circuits, wherein the centroids of these sections are arranged at equal intervals, classified in class 348, subclass 308.
  - III. Claims 35-52, 56, and 57, drawn to an image sensing apparatus with some sections containing light shielding regions, wherein the centroids of these sections are arranged at equal intervals, classified in class 348, subclass 245.
2. Claims 53 and 58 link inventions II and III. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claims. Upon the allowance of the linking claims, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claims are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting

rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

3. Inventions I and II are distinct, each from the other because they are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility, such as in an image sensing apparatus that does not include an adding circuit. See MPEP § 806.05(d).

4. Inventions I and III are distinct, each from the other because they are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility, such as in an image sensing apparatus that does not include an adding circuit. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and the search required for each group is not required for the other groups, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).

Art Unit: 2612

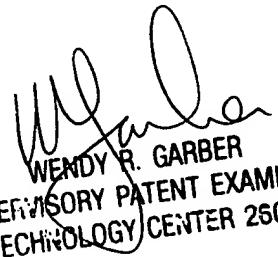

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Whipkey, whose telephone number is (571) 272-7321. The examiner can normally be reached Monday through Friday from 9:00 A.M. to 5:30 P.M. eastern daylight time.
